Arrays- DS

Problem Statement

An array is a series of elements of the same type placed in contiguous memory locations that can be individually referenced by adding an index to a unique identifier.

You'll be an given array of N integers and you have to print the integers in the reverse order.

Note: If you have already solved the problem Arrays Introduction in the Introduction chapter in C++ domain, you may skip this challenge.

Input Format

The first line of the input contains N,where N is the number of integers.The next line contains N integers separated by a space.

Constraints

$1 <= N <= 1000$

$1 <= A_i <= 10000$, where A_i is the ith integer in the array.

Output Format

Print the N integers of the array in the reverse order in a single line separated by a space.

Sample Input

```
4
1 4 3 2
```

Sample Output

```
2 3 4 1
```
